

QUESTION 1

What is the sum of 111_8 and 777_8 ?

- A. 10000_8 B. 8000_{10} C. 888_{10} D. 10100_8 E. 1110_8

QUESTION 2

What is output by the code to the right?

- A. 10 B. 20 C. 14
D. 16 E. 0

```
int x = 2;
int y = x * 2 + 3 * x;
System.out.print( y );
```

QUESTION 3

What is output by the code to the right?

- A. 21 B. 0 C. 20
D. 10 E. 40

```
int counter = 0;
for(int i = 0; i < 20; i++)
    counter++;
System.out.print( counter );
```

QUESTION 4

What is output by the code to the right?

- A. 5 B. 0 C. 6
D. 1 E. -1

```
String subj = "mathematics";
System.out.print( subj.indexOf( 'm', 3 ) );
```

QUESTION 5

What is output by the code to the right?

- A. 0.0 B. 8.0
C. 6.0 D. -4.0
E. There is no output due to a syntax error.

```
double[] vals = {1.5, -1.0, 2.0};
vals[1] *= 4.0;
System.out.print( vals[1] );
```

QUESTION 6

What is output by the code to the right?

- A. 9 B. 6 C. -9
D. 4 E. 1

```
int r = 3;
--r;
r *= r;
System.out.println( r );
```

QUESTION 7

What is output by the code to the right?

- A. true true B. true false
C. false true D. false false
E. true false true false

```
boolean p = true;
boolean q = false;
System.out.print( p && q );
System.out.print( " " );
System.out.print( p || q );
```

<p>QUESTION 8</p> <p>What is output by the code to the right?</p> <p>A. yno B. yn C. y</p> <p>D. yo E. o</p>	<pre>int j = 10; if(j < 10){ if(12 > j) System.out.print("y"); else System.out.print("n"); } else System.out.print("o");</pre>
<p>QUESTION 9</p> <p>What replaces <*1> in the code to the right so that the method <code>longSong</code> is accessible to code in all classes?</p> <p>A. private B. String C. void</p> <p>D. public E. java.lang</p>	<pre>public class Song{ private String name; private int lengthInSeconds; public Song(String nm, int len){ name = nm; lengthInSeconds = len; } <*1> boolean longSong(){ <*2> } }</pre>
<p>Assume <*1> is filled in correctly.</p>	
<p>QUESTION 10</p> <p>What replaces <*2> in the code to the right so the method <code>longSong</code> returns <code>true</code> only if the instance variable <code>lengthInSeconds</code> is greater than 180?</p> <p>A. <code>if(lengthInSeconds > 180)</code> <code>return true;</code> <code>else</code> <code>return false;</code></p> <p>B. <code>if(lengthInSeconds != 180)</code> <code>return true;</code> <code>else</code> <code>return false;</code></p> <p>C. <code>return lengthInSeconds > 180;</code></p> <p>D. <code>180.equals(lengthInSeconds);</code></p> <p>E. More than one of these.</p>	<pre>public Song(String nm, int len){ name = nm; lengthInSeconds = len; } <*1> boolean longSong(){ <*2> } }</pre>
<p>QUESTION 11</p> <p>What is output by the code to the right?</p> <p>A. true B. false C. 0</p> <p>D. 16 E. 29</p>	<pre>int x = 13; int y = 16; System.out.print(x y);</pre>

<p>QUESTION 12</p> <p>What is output by the code to the right?</p> <p>A. 1 B. 2 C. 0</p> <p>D. -2 E. 19</p>	<pre>System.out.print(Math.round(1.99));</pre>
<p>QUESTION 13</p> <p>What is output by the code to the right?</p> <p>A. OneTwo Three</p> <p>B. OneTwoThree</p> <p>C. One Two Three</p> <p>D. One TwoThree</p> <p>E. Two Three</p>	<pre>System.out.println("One"); System.out.print("Two"); System.out.println("Three");</pre>
<p>QUESTION 14</p> <p>What is output by the code to the right?</p> <p>A. 1.5 B. 1.50 C. \$2.00</p> <p>D. \$.50 E. \$1.50</p>	<pre>System.out.printf("\$%2.2f", 1.5);</pre>
<p>QUESTION 15</p> <p>What is returned by the method call <code>toy(3)</code>?</p> <p>A. 3 B. 5 C. 4</p> <p>D. 7 E. 9</p>	<pre>public static int toy(int value){ value++; value += 1; return value; }</pre>
<p>QUESTION 16</p> <p>Which of the following replaces <*1> in the code to the right to convert <code>str</code> to an <code>int</code>?</p> <p>A. <code>Integer.intValue()</code></p> <p>B. <code>num.toString(str)</code></p> <p>C. <code>Integer.parseInt(str)</code></p> <p>D. <code>Integer.compareTo(str)</code></p> <p>E. More than one of these.</p>	<pre>String str = "-123"; int num = <*1>;</pre>
<p>QUESTION 17</p> <p>What is output by the code to the right?</p> <p>A. 1455 B. 145 C. 5541</p> <p>D. 541 E. 5154</p>	<pre>int[] data = {5, 1, 5, 4}; Arrays.sort(data); for(int i : data) System.out.print(i);</pre>

<p>QUESTION 18</p> <p>What is output by the code to the right?</p> <p>A. -13 B. 0 C. 13</p> <p>D. -12 E. -12.7</p>	<pre>double negValue = -12.7; System.out.print((int)negValue);</pre>
<p>QUESTION 19</p> <p>Which of the following method calls would return true?</p> <p>I. Character.isLetter('8')</p> <p>II. Character.isDigit('8')</p> <p>III. Character.isLetterOrDigit('8')</p> <p>A. I only B. II only C. III only D. I and II only E. II and III only</p>	
<p>QUESTION 20</p> <p>What is output by the code to the right?</p> <p>A. 12 B. EV C. OD</p> <p>D. There is no output due to a syntax error.</p> <p>E. There is no output due to a runtime error.</p>	<pre>int val = 12; String stat = (val % 2 == 0) ? "EV" : "OD"; System.out.print(stat);</pre>
<p>QUESTION 21</p> <p>What is output by the code to the right when method test is called?</p> <p>A. 0 B. -1 C. 1</p> <p>D. 5 E. 3</p>	<pre>public static int find(int[] data, int tgt){ int loc = -1; int i = 0; while(loc == -1 && i < data.length){ if(data[i] == tgt) loc = i; i++; } return loc; } public static void test(){ int[] data = {3, 1, 5}; System.out.print(find(data, 7)); }</pre>
<p>QUESTION 22</p> <p>Which searching algorithm does method find implement?</p> <p>A. Binary search</p> <p>B. Stack search</p> <p>C. Interpolation search</p> <p>D. Gnome search</p> <p>E. Sequential search</p>	
<p>QUESTION 23</p> <p>What replaces <*1> in the code to the right to generate an Exception if data is null?</p> <p>A. catch new IllegalArgumentException()</p> <p>B. throw new IllegalArgumentException()</p> <p>C. try new Error</p> <p>D. try new IllegalArgumentException()</p> <p>E. throws IllegalArgumentException()</p>	<pre>public static boolean evenLen(int[] data){ if(data == null) <*1>; return data.length % 2 == 0; }</pre>

<p>QUESTION 24</p> <p>What is output by the code to the right when method <code>one</code> is called?</p> <p>A. <code>null:-1</code> B. <code>null:0</code> C. <code>:0</code> D. <code>none:-1</code> E. There is no output due to a <code>NullPointerException</code>.</p>	<pre>public class Album{ private String title; private int numSongs; public Album(){ this("none", -1); } public Album(String t){ title = t; } public Album(String t, int num){ title = t; numSongs = num; } public String toString(){ return title + ":" + numSongs; } ////////// client code ////////// public static void one(){ Album a = new Album(); System.out.print(a); } public static void two(){ Album a = new Album("Next"); System.out.print(a); } public static void three(){ Album a1 = new Album(); Album a2 = new Album(); System.out.print(a1.equals(a2)); } }</pre>												
<p>QUESTION 25</p> <p>What is output by the code to the right when method <code>two</code> is called?</p> <p>A. <code>Next:</code> B. <code>Next:-1</code> C. <code>Next:0</code> D. <code>Next:null</code> E. <code>Next:numSongs</code></p>													
<p>QUESTION 26</p> <p>What is output by the code to the right when method <code>three</code> is called?</p> <p>A. <code>false</code> B. <code>true</code> C. <code>null</code> D. There is no output due to a syntax error in method <code>three</code>. E. There is no output due to a runtime error.</p>													
<p>QUESTION 27</p> <p>What can replace the lines of code marked <code>line 1</code> and <code>line 2</code> in the code to the right without altering the output?</p> <table border="1" data-bbox="196 1549 805 1856"> <thead> <tr> <th>line 1</th><th>line 2</th></tr> </thead> <tbody> <tr> <td>A. <code>li.addFirst(1);</code></td><td><code>li.add(2);</code></td></tr> <tr> <td>B. <code>li.add(0,1);</code></td><td><code>li.addLast(2);</code></td></tr> <tr> <td>C. <code>li.addLast(1);</code></td><td><code>li.addLast(2);</code></td></tr> <tr> <td>D. <code>li.addLast(1);</code></td><td><code>li.addFirst(2);</code></td></tr> <tr> <td>E. <code>li.addFirst(1);</code></td><td><code>li.set(0, 2);</code></td></tr> </tbody> </table>	line 1	line 2	A. <code>li.addFirst(1);</code>	<code>li.add(2);</code>	B. <code>li.add(0,1);</code>	<code>li.addLast(2);</code>	C. <code>li.addLast(1);</code>	<code>li.addLast(2);</code>	D. <code>li.addLast(1);</code>	<code>li.addFirst(2);</code>	E. <code>li.addFirst(1);</code>	<code>li.set(0, 2);</code>	<pre>LinkedList<Integer> li; li = new LinkedList<Integer>(); li.add(1); // line 1 li.add(0, 2); // line 2 System.out.print(li);</pre>
line 1	line 2												
A. <code>li.addFirst(1);</code>	<code>li.add(2);</code>												
B. <code>li.add(0,1);</code>	<code>li.addLast(2);</code>												
C. <code>li.addLast(1);</code>	<code>li.addLast(2);</code>												
D. <code>li.addLast(1);</code>	<code>li.addFirst(2);</code>												
E. <code>li.addFirst(1);</code>	<code>li.set(0, 2);</code>												

<p>QUESTION 28</p> <p>What replaces <*1> in the code to the right to obtain the character at position <code>i</code> in the <code>String s</code>?</p> <p>A. <code>s[i]</code> B. <code>charAt(s, i)</code> C. <code>s.substring(i)</code> D. <code>Character(s, i)</code> E. <code>s.charAt(i)</code></p>	
<p>Assume <*1> is filled in correctly.</p>	
<p>QUESTION 29</p> <p>What is returned by the method call <code>myst("hot")</code>?</p> <p>A. <code>hot</code> B. <code>hoottt</code> C. <code>ott</code> D. <code>hhhoootttt</code> E. <code>hhhoot</code></p>	<pre>public static String myst(String s){ String result = ""; char ch; for(int i = 0; i < s.length(); i++){ ch = <*1>; for(int j = 0; j <= i; j++){ result = result + ch; } return result; } }</pre>
<p>QUESTION 30</p> <p>What will be the length of the <code>String</code> returned by method <code>myst</code> if the parameter <code>s</code> has a length of 20?</p> <p>A. 20 B. 400 C. 210 D. 55 E. 20! (factorial of 20)</p>	
<p>QUESTION 31</p> <p>What is output by the code to the right?</p> <p>A. <code>ads</code> B. <code>sad</code> C. <code>das</code> D. <code>sda</code> E. The output cannot be determined until run time.</p>	<pre>TreeSet<Character> set; set = new TreeSet<Character>(); set.add('s'); set.add('a'); set.add('d'); Iterator<Character> it = set.iterator(); while(it.hasNext()) System.out.print(it.next());</pre>
<p>QUESTION 32</p> <p>Which sorting algorithm involves splitting the unsorted data into smaller and smaller parts and then recombining the parts into larger and larger sorted lists?</p> <p>A. Quick sort B. Selection sort C. Insertion Sort D. Shell Sort E. Merge sort</p>	
<p>QUESTION 33</p> <p>What is output by the code to the right?</p> <p>A. 2 B. 4 C. 24 D. 213 E. 37</p>	<pre>Stack<Integer> s = new Stack<Integer>(); s.push(24); s.push(213); s.push(37); System.out.print(s.peek());</pre>

<p>QUESTION 34</p> <p>In the code to the right assume the <code>Collection col</code> contains <code>N</code> elements. What kind of <code>Collection</code> must <code>col</code> be so that each operation in method <code>demo</code> has an expected running time of $O(1)$?</p> <p>A. <code>ArrayList</code> B. <code>TreeSet</code></p> <p>C. <code>HashSet</code> D. <code>LinkedList</code></p> <p>E. <code>ArrayMap</code></p>	<pre>// precondition: col does not contain 1000 public void demo(Collection<Integer> col){ col.add(1000); boolean here = col.contains(1000); col.remove(1000); }</pre>
<p>QUESTION 35</p> <p>What is output by the code to the right?</p> <p>A. 9491 B. 1949 C. 1499</p> <p>D. 149 E. 941</p>	<pre>PriorityQueue<Integer> pq; pq = new PriorityQueue<Integer>(); pq.add(9); pq.add(4); pq.add(9); pq.add(1); while(!pq.isEmpty()) System.out.print(pq.remove());</pre>
<p>QUESTION 36</p> <p>What is output by the code to the right when method <code>recOne</code> is called?</p> <p>A. 22 B. 1 C. 4</p> <p>D. 15 E. 3</p>	<pre>public class RecDemo{ public int count; public int rec(int n){ count++; if(n == 0) return 1; else return 2 + rec(n - 1) + rec(n - 1); } } ////////// client code ////////// public static void recOne(){ RecDemo r = new RecDemo(); System.out.print(r.rec(3)); } public static void recTwo(){ RecDemo r = new RecDemo(); r.count = 0; r.rec(5); System.out.print(r.count); }</pre>
<p>QUESTION 37</p> <p>What is output by the code to the right when method <code>recTwo</code> is called?</p> <p>A. 63 B. 0 C. 5</p> <p>D. 127 E. 1</p>	

QUESTION 38

What is output by the code to the right when method `structOne` is called?

- A. 0
- B. null
- C. -1
- D. There is no output due to a syntax error in method `structOne`.
- E. There is no output due to a runtime error.

QUESTION 39

What is output by the code to the right when method `structTwo` is called?

- A. 317
- B. 3713
- C. 3173
- D. There is no output due to a syntax error in method `structTwo`.
- E. There is no output due to a runtime error.

QUESTION 40

What type of data structure does the `Structure` class implement?

- A. A stack
- B. A max heap
- C. A queue
- D. A binary search tree
- E. A min heap

```
public class Structure<E>{

    private Stack<E> first;
    private Stack<E> second;

    public Structure(){
        first = new Stack<E>();
        second = new Stack<E>();
    }

    public void add(E item){
        first.push(item);
    }

    public E get(){
        if( second.isEmpty() )
            fill();
        return second.peek();
    }

    public E remove(){
        if( second.isEmpty() )
            fill();
        return second.pop();
    }

    public boolean isEmpty(){
        return first.isEmpty() &&
                                   second.isEmpty();
    }

    private void fill(){
        while( !first.isEmpty() )
            second.push( first.pop() );
    }

    ////////// client code //////////
    public static void structOne(){
        Structure<Integer> s;
        s = new Structure<Integer>();
        System.out.print( s.get() );
    }

    public static void structTwo(){
        Structure<Integer> s;
        s = new Structure<Integer>();

        s.add(3);
        s.add(1);
        s.add(7);
        s.add(3);

        while( !s.isEmpty() ){
            System.out.print( s.remove() );
        }
    }
}
```
